Gynecological Problems in the Reproductive Years

Content Outline

1. Abnormal Uterine Bleeding
   1.1 Anovulatory bleeding characteristics
   1.2 Ovulatory bleeding characteristics
   1.3 Treatment

2. Infertility
   2.1 History and Physical Examination
   2.2 Diagnostic testing
      2.2.1 Ovulation testing
      2.2.2 Patient education about ovulation and how to detect it
   2.3 Management
      2.3.1 Ovulation inducting agents
      2.3.2 Intrauterine insemination

3. Benign Breast Disease
   3.1 Breast Infections
      3.1.1 Mastitis
      3.1.2 Breast abscesses
   3.2 Inflammatory Conditions of the Breast
      3.2.1 Breast edema
      3.2.2 Fat necrosis
   3.3 Non-proliferative disorders of the breast
      3.3.1 Cystic disease
      3.3.2 Ductal Problems
   3.4 Proliferative Disorders of the Breast
      3.4.1 Fibroadenoma
      3.4.2 Papilloma and nipple discharge
   3.5 Breast Pain

Objectives

- Identify terms used for describing abnormal uterine bleeding
- Differentiate between anovulatory and ovulatory diagnosis and evaluation
- Describe the treatments for abnormal uterine bleeding based on their etiology
- Review the evaluation process for women/couples who present with either primary or secondary infertility
- List the types of diagnostic testing for initial evaluation of infertility
- Discuss the initial treatments for infertility and when to refer
- Compare and contrast the different types of benign breast conditions
- Summarize treatment for breast infections, proliferative and non-proliferative disorders of the breast and breast pain
Gynecological Problems in the Reproductive Years
