Double Trouble - Neonatal Sepsis & Shock

Content Outline

1. Assessing & Managing Neonatal Septic Shock & Hypovolemia
   1.1 Risk factors & transmission patterns for neonatal sepsis
   1.2 Comparison of age group hemodynamic responses to sepsis
   1.3 Treatment approaches for neonates with septic shock
      1.3.1 Fluid-refractory shock
      1.3.2 Catecholamine-resistant shock
      1.3.3 Hypovolemic shock

2. Overview of Early-Onset Sepsis (EOS) in the Neonate
   2.1 Incidence rates & definitions related to neonatal sepsis
   2.2 Maternal & neonatal risk factors for early-onset sepsis (EOS)
   2.3 Common signs & symptoms of EOS with diagnostic workup approaches
   2.4 Variations in clinical practice surrounding approach to GBS EOS
   2.5 National Institute of Health and Care Excellence treatment guidelines
   2.6 Nursing management and parental support
   2.7 Prognosis and recommendations

Reading Material Resources

Module WB2138: Double Trouble – Neonatal Sepsis & Shock is based on the resources listed below. A copy of each resource is included with the module.
